1.9 CURRENTS:
Currents in the Bay of Bengal are seasonal and are mainly due to South-West and North-East monsoons. From February to June, offshore currents flow toward the North-East and from August to December towards South-west at velocities ranging from 0.5 to 1.0 Knots in the Outer Harbour.

1.10 VISIBILITY:
Visibility is good throughout the year as fog is infrequent at sea in all seasons. Reduction in visibility is mostly due to heavy rainfall during the South-West monsoon. The highest monthly average duration recorded fog is 0.1 Day in some Months from December to May.

1.11 CYCLONES:

The average number of cyclones occurring at Visakhapatnam is 4 to 5 per year. Cyclone Storms and depressions occur with great frequency in August, October and November.

2.0 EXISTING BERTHS:
The schematic details of the existing berths and approaches are shown in Drg. No. IPA\VPT\GCB\01 as enclosed in TEFR. The Inner Harbour has 18 nos. of berths and Outer Harbour has 6 nos. of berths.

There are proposals to construct additional berths in the Inner Harbour and Outer Harbour.

PROJECT REQUIREMENTS

Project Facilities and Services:
The project requirements are as explained in detail in the TEFR, which is an enclosure to RFP document. However, the Concessionaire on their own shall submit the scheme and design of the Project as per the Clause No.1.1.3 (xiii) of RFP document. brief scope of the project includes planning, designing, engineering, financing, construction, management, operation and maintenance of the project, project facilities and services.

CIVIL AND STRUCTURAL WORKS:

i. Strengthening of the berth to cater to 200,000 DWT vessels:

The existing General Cargo Berth in the Outer Harbour was built with a width of about 22.20 Mtrs. and 356 Mtrs. long with a dredged depth of (-)16.5m CD to cater to 100,000 DWT vessels. Now in order to cater to the vessels of 200,000 DWT vessels, it is necessary to strengthen the berth by widening by 21 Mtrs towards Sea side with additional rows of piles for substructure and with about 2.35 Mtrs thick solid slab for super structure with necessary marine fixtures.

ii. Necessary repairs to the existing berth as per safety audit requirements:

As per the inspections carried out by the Port and through one of the reputed Research Institute viz., SERC, it is required to undertake certain special repairs duly conducting necessary safety audit. Also since the berth is being upgraded to 200,000 DWT vessels and in view of the service life of 25 years already rendered by this berth, it is required to conduct the safety audit to ascertain the strength and condition of the structure to enable integrating the same with the proposed additional width of berth to cater to 200,000 DWT size vessels.

iii. Dredging:

The water depth available at the berth is (-)16.50 Mtr which is adequate to handle 1,00,000 DWT vessels. In order to handle 200,000 DWT vessels with draft of 18.0m, the depth at the berth need to be deepened to (-) 20.00m CD with adequate keel clearance for fully loaded ships.

iv. Track for the marine unloader on the berth:

To facilitate unloading cargoes, three Grab gantries are to be provided on the berth. In order to support and enable movement of these gantries, provision shall be made for CR 100 rail track along the length of the berth.
v. **Foundations for the hopper track:**

The cargo shall be discharged from the ship's holds to conveyor installed immediately behind the berth through mobile hoppers which are proposed to move anywhere along the length of the berth for which necessary rail tracks supported on foundations shall be provided.

vi. **Conveyor gallery on the rear side of the berth:**

The Grab Gantry provided on the berth shall discharge the coal from the ship's hold to a conveyor installed behind the berth through mobile hoppers which is further connected to overhead conveyors. Therefore, provision shall be made for the conveyor to receive the cargo from the ship to the location immediately behind the berth.

vii. **Conveyor gallery and supports from berth to the stock pile area:**

Coal on the unloaded conveyors will be conveyed to the stacks at the East Dumps by a system of overhead conveyors. There shall be a system of four conveyors for each of the unloading conveyors, for the transportation of coal to East Dumps.

viii. **Stacker and reclaimers tracks with foundations and conveyors:**

Necessary railway tracks with suitable foundations and a suitably designed stacking system shall be provided consisting of receiving conveyors, stacking conveyors for stacking the coal as well as to reclaim and transport with suitable capacities for feeding to the wagon loading system. Necessary foundation with rail tracks with foundations shall be provided for the stacker and reclaimers stacks.

ix. **Development of stock pile area including necessary ground improvement:**

An area on 1,22,330 Sq. M. has been identified for stacking the coal at the East Dumps from where the cargo is further loaded into the rakes through stacking system as indicated above. Ground improvement shall be carried out for the stock pile area, for soil improvement by installation of suitably designed PVC band drains or similar methods at suitable spacing and pattern and pre-consolidation by keeping the pre-load of sufficient height of gravel for designed preload period. Upon soil stabilization the stockpile area shall be provided with hard standing comprising stone soling and filling the gaps with stone spalls. This soil improvement would enable stack heights of the order of 7 Mtrs. as required to cater to the throughput requirement.
x. **Wagon loading platform with suitable foundation and conveyor supports:**

The Wagon Loading System consists of Wagon Loading Conveyor and Wagon Loader. The reclaimed coal from the Reclaiming Conveyors shall be fed to the Wagon Loading Conveyor through link conveyors and the reclaimed coal shall be loaded into the wagons by the traveling wagon loader. The Wagon Loading System shall be installed on an elevated platform of sufficient height to ensure free unhindered movement of the trains.

xi. **Railway tracks:**

Railway tracks shall be provided for supporting various mechanical equipment and the railway train movement and the same shall be proposed on a formation over the natural ground with suitable stone aggregates as base course, PSC sleepers and necessary rail fixtures.

xii. **Dust suppression system and dust extraction system:**

The entire stock pile area and transfer houses of the conveyor gallery are to be provided with suitable dust suppression system as an environmental mitigative measure to control the dust that may arise during the operations, duly ensuring compliance to the standards as expected by the authorities concerned.

xiii. **Green plantation and perimeter walls:**

To contain the finer particles in the air due to cargo handling operation and to improve aesthetics in the area, a 10 M. thick green belt is to be provided all around the stacking area which is also an environmental mitigative measure.

xiv. **Water supply:**

Water supply requirement for operational buildings and utilities shall be drawn from nearby port mains and suitable provisions are to be made for the pipelines etc.

The Concessionaire shall adhere to the following berth construction stages:

i) **Stage-1:** Construction will be restricted to a length of 100 metres only, from the North end of GCB.

ii) **Stage-2:** Construction would be from South end duly restricting the length to 100 metres.

iii) **Stage-3:** The balance work of 156 metres.
Planning, design, engineering, installation, operation and maintenance of all developmenta
works shall comply to the relevant Indian Standards and in the absence of Indian standards
relevant International Standards shall be complied with. List of construction, operation &
maintenance are annexed to this Article. In the absence of both, the Concessionaire bidder
should follow good industry practice. Safety precautions, as per statutory requirements, shall
also be complied with. The concessionaire shall ensure compliance to Quality,
Environmental, Occupational Health and Safety and ISPS Codes. The performance standards
shall generally comply as set out in Appendix-15.

Equipment:
The coal is at present unloaded using floating cranes and ship’s gear and evacuated using
trucks. The Project envisages complete mechanization of the coal handling to achieve an
handling rate of 70,000 TPD for 200,000 DWT vessels using Gantry Unloaders with suitable
Grabs and transportation through Conveyors of commensurate capacities.
The coal shall be stacked and reclaimed through Stackers and Bucket Wheel Reclaimers of
suitable capacities.
The wagon loading shall be by a mechanical wagon loader of suitable capacity.

Other facilities:
The project envisages installation of loading lines, all connected Civil Works, Power Supply
systems, Illumination arrangements, Dust Control and environmental protection measures and
Fire Fighting equipment.

The Mechanical Handling System for unloading of coking coal and steam coal at GCB in the
Outer Harbour will comprise Ship Unloading System, Stackers, Reclaimers, Wagon Loading
System and a System of Conveyors. As the general characteristics like bulk densities, angle
of repose, etc. of both the commodities are almost same and as there is no significant
variation, the same system will be used for handling both the cargo. However, during detailed
engineering, the design will be based on significant characteristic of each of the cargo to get
the desired output and trouble free operation. For example, the capacities of the components
of the System like Conveyors and Equipment will be designed for the lower densities and
transfer chutes will be designed for higher lump sizes.
The details of equipments to be installed for the subject project are detailed below:

2. RECOMMENDED INSPECTION PERIODS, STRUCTURES AND PLAN FOR THE PROJECT:

The following table suggests the periodicity for the recommended routine inspection of the principle items of the Project is as follows of port structures and plant. Where structures or plant may have been affected by an incident, inspection should take place immediately to determine whether the item is fit to return to service. Naturally, the existence of a scheduled periodic technicians and supervisory staff to maintain a continuous watch on the condition of structures and plant and to report any sign of defect as soon as it is observed is necessary.

   b) Verification of all critical dimensions.
   c) Checking and testing of all motions, without load (physically in coupled / decoupled condition or deriving from the test results).

2.2. Copies of all test & checking reports and certificate regarding successful completion of design shall have to be submitted to the Engineer before shipment. Based on the satisfactory test report and design appraisal certificate, the despatch clearance will be given by the Engineer, before shipment.

2.3. FINAL TESTING & COMMISSIONING:
After completion of the erection and installation of the Reclaimer, all equipment and machinery shall be tested and the same shall be run without load and all necessary adjustments shall then be completed.

Following Testing / Inspection / Checking should be carried out in presence of the Independent Engineer at the site.
   a) Tests for Long travel Operation, Boom Luffing Range, Boom Slewing Range as per Principal Technical Parameters, including all specified movements, etc.
   b) Operation of all limit switches, safety trips, cut outs, emergency stops and control device.
c) **Endurance Test:**

   Endurance Test for minimum 12 hours operation (in 3 phases of continuous work for minimum 4 hrs.), shall have to be shown by the Contractor at site.

d) **Demonstration of guaranteed capacity.**

   The Contractor shall have to demonstrate regarding achieving the guaranteed capacity of 4500 MT per hour, before handing over, as per the procedure detailed below. The Contractor shall demonstrate that the Conveyor system & equipments shall be able to meet the guaranteed capacity requirement specified herein without any undue strain and vibration. It shall be able to achieve the speed of various motions as assumed for guaranteed capacity calculation by the Contractor. The test for guaranteed capacity shall be carried out for continuous operation for 1 (one) hour. Such test, as described above, shall be repeated three times and average quantity of Coal reclaimed (in MT) thereof will be used to arrive at the guaranteed capacity of 4500 MT per hour.

2.4. **INSPECTION OF WELDING JOINTS, CASTING & FORGING:**

   a) All welding work, casting and forging shall be subjected to radiographic or ultrasonic testing as per design requirement and Test Certificate shall be furnished. The Engineer or his representative or the third party inspection agency reserves the right to examine the radiographic films of welding joints independently. In case of difference of opinion on a radiographic film about the soundness of any welding joint between the Contractor and the Engineer, the opinion of any Govt. Testing Laboratory / Institution or Govt. Recognized Testing Laboratory / Institution in India shall govern.

   b) Suitable means shall be adopted in identifying each radio graphically tested joint with reference to the radiographic films even after commissioning and the same information shall be furnished to the Employer at the time of delivery of the equipment for documentation.

   c) Minimum 300 millimeters for each 1000 millimeter length of welding joints shall be radio graphically tested whenever design / manufacturing drawings call for testing.

   d) The Engineer reserves the right to test radio graphically about 3% length of any other welding joints, which are not covered in above para(ii).

   e) If any of the tests shows defective welding, further test shall be carried out. All such tests shall be at the Contractor's cost.
f) All radiographic quality welding joints shall be principally grade ‘black’. However, grades ‘blue’ and ‘green’ will also be acceptable, subject to the approval of the Engineer, on tension and shear load-carrying members respectively provided they are of short lengths.

3. STANDARDS, ACTS, RULES:

3.1. The system of units known as the System International (S.I.) shall be adopted.

a) The transformer and motor shall be given tests by the manufacturer according to their respective standards; manufacturer shall provide certified test reports. The switchgear shall be tested after assembly at the factory of wiring and functioning of the equipment.

b) After installation, all circuits and equipment shall be tested by the Contractor for grounds, short circuits and proper operation.

c) All cables, motors, instrument transformer and all dry type transformers shall be meggered by the Contractor and a log kept of such tests. This log shall be certified by the Engineer before completion of the job both as test and date of test.

d) The 415 volts circuit breakers and starters shall be given a die-electric test of 2000 volts for the minute between Live parts and ground and between opposite polarities. The wiring and control circuits shall be given a die-electric test of 1500 volts for one minute between live parts and ground.

APPENDIX 12

TARIFFS

UPFRONT TARIFF SCHEDULE FOR MECHANISED HANDLING OF COKING COAL AND STEAM COAL

1.1. DEFINITIONS

In this Scale of Rates unless the context otherwise requires, the following definitions shall apply:

(i) "Coastal vessel" means any vessel exclusively employed in trading between any port or place in India to any other port or place in India having a valid coastal licence issued by the competent authority.

(ii) "Foreign going vessel" means any vessel other than a Coastal vessel.

(iii) "Day" shall mean the period starting from 6.00 A.M. of a day and ending at 6.00 A.M. on the next day.

1.2. GENERAL TERMS & CONDITIONS

(i) The status of the vessel, as borne out by its certification by the customs or Director General of Shipping, is the relevant factor to decide whether vessel is "coastal" or "foreign-going" for the purpose of levy of vessel related charges; and the nature of cargo or its origin will not be of any relevance for this purpose.

(ii) (a) The berth hire charges for all coastal vessels should not exceed 60% of the corresponding charges for other vessels.

(b) The cargo related charges for all coastal cargo other than thermal coal should not exceed 60% of the normal cargo related charges.

(c) In case of cargo related charges, the concessional rates should be levied on all the relevant handling charges for ship shore transfer and transfer from/to quay to/from storage yard including wharfage.

(d) Cargo from a foreign port which reaches an Indian Port "A" for subsequent transshipment to Indian Port "B" will be levied the concession charges relevant for its coastal voyage. In other words, cargo from/to Indian Ports carried by vessels permitted to undertake coastal voyage will qualify for the concession

(iii) Interest on delayed payments / refunds.

(a) The user shall pay penal interest on delayed payments of under this Scale of Rates. Likewise, the terminal operator shall pay penal interest on delayed refunds.

(b) The rate of penal interest will be 2% above the prime lending rate of the State Bank of India.

(c) The delay on refunds will be counted only 20 days from the day of completion of services or on production of all the documents required from the users, whichever is later.
(d) The delay in payments by the users will be counted only 10 days after the date of raising the bills by the terminal operator. This provision shall, however, not apply to the cases where payment is to be made before availing services where payment of charges in advance is prescribed as a condition the scale of rates.

(iv) In calculating the gross weight or measurement by volume or capacity of an individual item, fractions upto and inclusive 0.5 shall be taken as 0.5 unit and fraction of above 0.5 shall be treated as one unit, except where otherwise specified.

(v) All charges worked out shall be rounded off to the next higher rupee on the grand total of the bill.

(vi) (a) The rates prescribed in the Scale of Rates are ceiling levels: likewise rebates and discounts are floor levels. The terminal operator may, if they so desire, charge lower rates and/or allow higher rebates and discounts.

(b) The terminal operator may also, if they so desire, rationalise the prescribed conditionalities governing the application of rates prescribed in the Scale i.e., if such rationalisation gives relief to the user in rate per unit and the unit rates prescribed in the Scale of Rates do not exceed the ceiling levels.

(c) The terminal operator should notify the public such lower rates and/or rationalisation of the conditionalities governing the application of such rates. Provided the new rates fixed shall not exceed the rates notified by the TAMP.

(vii) Users will not be required to pay charges for delays beyond reasonable level attributable to terminal operator.

(iii) No berth hire shall be levied for the period when the vessel idles as its berth for continuous one hour or more due to non-availability / break down of terminal operator's equipment or power failure or any reasons attributable to the terminal operator.

(iv) (a) Berth hire shall stop four hours after the time of the vessel signaling its readiness to sail.

(b) The time limit of 4 hours prescribed for the cessation of the berth hire shall exclude the ship's waiting time for want of favorable tide conditions, inclement weather and due to lack of night navigation.
(c) The Master / agent of the vessel shall signal readiness to sail only in accordance with favourable tidal and weather conditions.

(v). The Penal berth hire shall be equal to one-day's (24 hours) berth hire charges for a false signal.

"False Signal" would be when the vessel signals readiness and asks for a pilot in anticipation even when she is not ready for un-berthing due to engine not being ready or cargo operation not completed or such other reasons attributable to the vessels. This excludes signaling readiness when a vessel is not able to sail due to unfavorable tide, lack of night navigation or adverse weather conditions."

Such automatic adjustment of tariff caps will be made every year and the adjusted tariff caps will come into force from 1 April of the relevant year to 31st March of the following year.

**Note:** Sl.No.6 regarding Indexation of Tariff caps with reference to the variation in Whole Sale Price Index (WPI), TAMP’s letter No.TAMP/12/2009/Miscellaneous-dt.04.04.2010 states as follows.

"The escalation factor to be applied for Tariff with base Whole Sale Price Index (WPI) as on 01.01.2009 is 1.28% and the adjusted up front tariff will be in force for the period 01.04.2010 to 31.03.2010."

Performance Standards

1. Gross Berth Output

The parameter deals with the productivity of the terminal (Gross Berth Output) for different types of cargo. In case of dry and break-bulk cargo, the capability of the terminal (mechanization, method of handling) and parcel size will determine the Gross Berth Output. Higher terminal capability and greater parcel size will lead to high productivity.

The Gross Berth Output shall be calculated as the total cargo handled (either loaded / unloaded) from the ship during a month divided by the time spent by the ship at the terminal ie number of working days at the berth.

The indicative norms for Gross Berth Output for different categories of cargo are as follows:

<table>
<thead>
<tr>
<th>Cargo Category</th>
<th>Indicative Norms</th>
</tr>
</thead>
<tbody>
<tr>
<td>Coking Coal - Import (Mechanized)</td>

</tr>
<tr>
<td>Cape size</td>
<td>Coking Coal</td>
</tr>
<tr>
<td>Panamax</td>
<td>Coking Coal</td>
</tr>
<tr>
<td>Panamax</td>
<td>Steam Coal</td>
</tr>
</tbody>
</table>
2. Transit Storage Dwell Time:

Bulk Cargo

The Transit Storage Dwell Time for coal / coke / mixed dry bulk cargo / liquid cargo shall be calculated, as half of average parcel size of above cargo vessels in a month divided by average disposal of cargo from the port per day as per the following methodology:

Average disposal of Cargo per day \( (A) = \frac{OB + \text{Received } / \text{Despatched CB}}{\text{No. of days}} \)

\( OB = \text{Opening Balance, CB = Closing Balance.} \)

Average Parcel Sizes \( (B) = P_1 + P_2 + \ldots + P_n \)

\( n = \text{no. of parcels} \)

\( P_1, P_2, \ldots, P_n \) are parcel size of each vessel in a month.

Transit Storage Time for Bulk Cargo = 0.5 \( (B/A) \)

- Import

Coking Coal & Steam Coal: 10 \( (\text{Ten}) \) days after date of completion of vessel's discharging operation

Performance Evaluation and calculation of liquidated damages:

Performance evaluation shall be made on a quarterly review of the reports furnished by the Concessionaire and / or the records of the Concessionaire and/or by an enquiry by the Concessioning Authority. The Concessionaire shall be liable to pay liquidated damages determined at the rate of 1% (one per cent) of the Gross Revenue of the respective quarter for every shortfall of 10% (ten per cent) in the average performance which shall be assessed in the following manner.

Each Performance Standard is calculated as an average in the manner indicated above. The actual average performance vis-à-vis a standard will be evaluated against the prescribed standard. The shortfall will be computed as a percentage of the prescribed standard. The shortfall in respect of each performance standard will have a weightage assigned to it. The overall shortfall in average performance shall be assessed as the aggregate of the weighted shortfalls in respect of each of the performance standards. For example, if there is a shortfall in Gross Berth Output by \( x \)% , Transit Storage Dwell Time by \( y \)% and Turn round time for receipt/delivery operations by \( z \)% and the weightage assigned to such shortfalls is 0.7, 0.2 and 0.1 respectively, then the overall shortfall in average performance will be \( (0.7x + 0.2y + 0.1z)\)%.
